ITALIAN BROCCOLI

This vegetable aristocrat is rapidly attaining unusual popularity. The rapid-growing, tall-branching plant forms, within 90 days, a central head of bluish green flower-buds resembling a loose head of cauliflower. It is cooked and served like cauliflower.

Culture. Very easy to grow. Culture same as for cabbage. It requires a definitely cool season for its proper growth. One ounce will produce 1,500 plants; 4 to 6 ounces, an acre.

597 Waltham 29. Fine for market and freezing. Produces dark green center heads with fine buds and strong side sprouts. Plants are short and sturdy. Pkt. 15c; oz. 45c; ¼ lb. \$1.40; lb. \$4.00; 5 lbs. \$18.75. Not prepaid: 10 lbs. \$35.00.

BEANS

FOR HOME
MARKET or SHIPPING

How to Grow Beans: Plantings commence in the Lower South during January, February and March. Sow $1\frac{1}{2}$ to 2 inches deep, 3 to 4 inches apart, in rows $2\frac{1}{2}$ to 3½ feet apart. Cultivate often until plants blossom. Deep cultivation when in bloom will cause many flowers to fall, and cultivating when plants are wet with dew may cause rust and spread anthracnose if it is present. Frequent picking insures a prolonged bearing season. Two pounds will sow 100 feet of row; 60 pounds (bushel), an acre.

TENDER *Rich Red* BEETS

An important commercial truck crop in the South. Beets are also a good home-garden vegetable. The young plants are considered to be superior to spinach and turnips for greens. Reuter's Beet Seed is carefully bred and selected to produce smooth, uniform, beautifully formed, and attractive blood-red Beets of the finest quality.

Culture. Space the rows 18 to 24 inches apart. Work soil well and cover seed 1 inch deep. A rich sandy loam is preferable, but nearly all soils will produce Beets if sufficiently fertilized and properly cultivated. When well started, thin plants to 3 to 4 inches apart. Beets are usually more tender and succulent when about 2 inches in diameter. One ounce will sow 50 feet of row; 5 to 6 pounds to an acre.

58 Perfected Detroit. 52 days. The finest strain of the famous Detroit Beet on the market today. It is the result of ten years of inbreeding and re-selection to produce a stock that has marvelously rich blood-red meat all the way through. It has no white or light colored zones in the flesh. Remains tender and of the highest quality until roots are fully grown. It cans red with no browns or purples. Superior for the table. Its globe-shaped roots are uniform in shape, color and size, and its uniform, small, slender and erect tops appeal to the commercial grower and shipper. Pkt. 15c; oz. 25c; ¼ lb. 60c; lb. \$1.85; 5 lbs. \$8.50. Not prepaid: 10 lbs. \$14.00; 25 lbs. \$32.50.

Culture. Requires rich soil and abundant moisture. One ounce will produce 2000 strong plants; ½ pound sufficient for an acre.

Crisp Delicious LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than ½ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

ICE BOX MELONS

626 SUGAR BABY ▶

70 days. Sugar Baby, in our opinion, is the best ice box variety watermelon now in production. One of its distinct advantages is its structure suitable for bulk shipments. It is small, (6-10 lbs.), perfectly round and very dark green with a hard rind. When immature, the melons are distinctly striped but become almost black when ripe. Seeds are small and the cut appearance is exceptionally good. Ice box melons have always enjoyed a good demand but "Sugar Baby" opens the door for even greater demand and acceptance. HOW TO GROW 'EM

Rich sandy loam soils are considered best for Watermelons but good crops are grown on any well-drained, fertile soil. Adding well-rotted manure to soil gives the plants a good start and to commercial growers we recommend an application of 600 to 800 pounds of commercial fertilizer (analyzing about 4 per cent ammonia, 12 per cent phosphoric acid, and 4 per cent potash) to the acre. Space hills at least 10 feet apart. This method will give about 360 hills to the acre. When the soil has become warm, drop 6 to 8 seeds in each hill and cover about 1 inch. Later thin to 2 to 3 of the largest plants. One ounce will plant 25 hills; 1½ to 2 pounds per acre.

NUMBER 605A

TRI-X #313 HYBRID

SEEDLESS WATERMELON

1. TO SPROUT, TRI-X Hybrids Like A Little WARMER SOIL. The optimum soil temperature is about 85° F. Seed planted real early usually don't produce fruits much ahead of the ones planted a little bit later when the weather is really favorable for rapid and healthy plant growth.

2. SOME REGULAR SEEDED MELON VARIETY MUST BE PLANTED WITH TRI-X HYBRIDS FOR POLLINATORS. Since TRI-X Hybrids are sterile, the male pollen flowers do not produce good pollen. TRI-X flowers need the good pollen from any variety of seeded melon plants to set fruit. One row of regular seeded type melon planted for every two rows of the TRI-X Melon should be sufficient.

3. TRI-X HYBRIDS MELONS ARE SUPERIOR TO SEEDED MELONS. This difference is the main reason you are planting TRI-X HYBRIDS. SEEDLESSNESS—EXQUISITE FLAVOR AND SWEETNESS—COMBINED WITH THE DELICATE, CRISP TEXTURE OF TRI-X HYBRID FRUITS will cause you to say: "This is the finest watermelon I have ever tasted."

Note: MEANING OF "SEEDLESS." While the TRI-X HYBRID MELON is for all practical purposes "Seedless" sometimes the undeveloped ovules harden like seeds. Empty seed coats of a normal size and color may occasionally be found in TRI-X fruits. These ovules can be eaten along with the flesh much as we eat cucumbers. Pkt. \$1.00. Price includes regular seeded melon for pollinating.

Sow in seed-beds and when 5 to 7 inches high transplant in rows 12 to 15 inches apart and 3 to 4 inches apart in the row. In some sections the seed is sown directly in the field in rows 18 to 20 inches apart. Cultivate every 10 days to keep down weeds and conserve soil-moisture.

PURE BRED

Luscious Tomatoes

No garden should be without its quota of Tomatoes. They require little care and yield heavily in a small space. No vegetable can be put to more uses, cooked or in salads, than Tomatoes. They are rich in vitamins, and valuable as an appetizing dish in many ways.

Maturity dates given are from the setting of plants to marketable fruits.

Culture. For early fruit, sow thinly in a hotbed or indoors in shallow boxes. Harden plants by exposing to the air occasionally. In about 6 weeks the plants will be ready to set out, provided danger of frost is over. The rows should be 4 to 5 feet apart and the plants about 3 feet apart in the row, or 2 feet in row if staked. Cultivate as long as the vines will permit. Tomatoes are much improved in appearance and quality when trained to stakes. The usual method is to set one strong plant to a 5- or 6-foot stake, tying the plant up and pruning it quite freely as the vine advances in growth. One ounce will produce 1500 plants; 4 to 6 ounces will furnish sufficient plants for an acre.

571 KOPIAH

California Grown. A new variety developed at the Truck Crops Branch Experiment Station, Crystal Springs, Mississippi. Kopiah produces a stocky, indeterminate plant with dark green, dense foliage, giving better fruit coverage. Fruits are globular in shape and borne in clusters of six to eight. At the mature green stage the fruits are slightly darker green than Rutgers, and, upon ripening, change to a uniform dark red. Kopiah is one of the very few commercial varieties that has true resistance to Fusarium Wilt. Kopiah is destined to become one of the most important shipping and canning Tomatoes. Pkt. 15c; ½ oz. 55c; oz. 95c; ¼ lb. \$2.75; 5 lbs. \$9.00; 5 lbs. \$42.00.

Jefferson Tomato

541 JEFFERSON

California Grown. This tomato has gained in popularity faster by far than was expected. This general acceptance is undoubtedly due to its vigor, prolificness, and resistance to Fusarium Wilt. Especially suited to staking in the Southeastern states and does well in open field culture. Pkt. 15c; ½ oz. 50c; oz. 85c; ¼ lb. \$2.35; 5 lbs. \$7.50; 5 lbs. \$35.00.

EMERALD ZOYSIA. A most beautiful lawn grass for the South. It is narrow leaved, very dark green and spreads relatively fast. Does not require as many mowings as most other grasses and after fully established has a tendency to crowd out and smother weeds. Excellent in full sun but takes up to 80% shade. **\$5.00 sq. yd. prepaid.**

NOTE: Deliveries on ZOYSIAS BEGIN IN APRIL

CENTPEDE GRASS

848 Wonderful for producing lawns even on poor soils. It is a low growing perennial that makes a dense mat of creeping stems and leaves. While it grows well in poor soil—a complete fertilizer will encourage a more rapid spread of dense turf.

Centipede grown from seed establishes itself in a relatively short time depending of course on the care given it. $\frac{1}{4}$ lb. will plant 1,000 sq. ft. $\frac{1}{4}$ lb. **\$4.10**; $\frac{1}{2}$ lb. **\$7.90**; 1 lb. **\$15.25**.

CARPET GRASS

830 Carpet Grass. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. It is strictly a pasture or lawn grass and stands close grazing and heavy trampling. Hulled BERMUDA GRASS

826 Hulled Bermuda Grass. The hull is removed thereby giving a much quicker germination. Under favorable conditions will germinate in 7 to 10 days. Furthermore, it is economical because only about half the quantity is necessary to sow 100 square feet of lawn. Plant 10 lbs. per acre for pasture, and 3 lbs. to 1000 square feet for lawns. Lb. **\$1.20**; 5 lbs. **\$4.85**. Not prepaid: 10 lbs. **\$7.20**; 100 lbs. **\$67.00**.

Not prepaid: Bus. **\$2.25**; 10 bus. **\$20.00**. Available April to October.

ZOYSIA JAPONICA GRASS

828 Japanese Lawn Grass. Will thrive well both in the full sun and in dense shade. Because it grows only 3 to 4 inches tall it requires little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to chinch bugs and has a tendency to crowd out crab grass.
